

“DAB & Play” system for connection to the Original DAB antenna in vehicles of the Volkswagen Group

PRELIMINARY REMARKS

The original antennas installed in the rear window or in the quarter windows of many vehicles of the Volkswagen Group are designed to receive the Digital Radio signals. The “DAB & Play” system developed by Calearo Antenne allows one to make use of this predisposition in combination with any type of DAB receiver, both original and aftermarket. Seamlessly integrated with the car’s system, the module allows to benefit from the high quality reception of the original antenna system. The “DAB & Play” kit consists of an amplifier which substitutes the original one, a cable for DAB connection and the installation guide

Combination of the “DAB&Play” with interfaces, car radios or audio systems without support for Phantom feeding

When the “DAB & Play” system is installed in combination with interfaces, car radios or audio systems which do not support the phantom feeding (feeding through the DAB cable), it is necessary to use the Calearo phantom feeding adapter p.no. **7581134**
